1   Readme Spanish Quiz Alexa Skill

For this project the Alexa Skills Kit was used to engineer a Spanish quiz style game that examines user knowledge for distinguishing the Spanish prepositions 'por' and 'para'.

2   Getting Started

2.1   How to get the program up and running

The tar ball, hw.tar.gz, submitted with the program contains the following files used to run the program:

spanish_quiz.json	The logic for the skill, and definitions for the voice interface through which users interact with the skill. This file defines the intents, sample utterances, custom slot types in order to fulfill user spoken requests.
lambda_function.py	Function file used in concordance with Amazon Web Services in order to provide Alexa responses support

To begin the program, there is no need to install. Simply place these files into their respective slots of a project in the ASK and AWS of the Alexa API. With the Spanish Quiz skill enabled, speak the command 'Run Spanish Quiz'.

2.2   Pre-Requisites

Python3.6 must be enabled in the project in order to use this program. Also, an Amazon AWS and ASK account must be created in the user's name.

2.3   Author of Program

The Author of this program is Benny Longwill from Ling 575.
